LAB SAMPLES FOR SEPTEMBER

- 10 Bac-T samples
- 2 Fluoride samples
- 1 TOC sample
- TSS sample

September safety meeting: Classes of fires and Extinguishers

September M.O.R. mailed on October 3.

At left is a picture of a basin drained. In September we drained and cleaned both basins. This removes sludge and algae that build up over time. This is done about every four months; depending on weather and temperature.

Barry Johns from Wasconcame and calibrated our raw water flow meter. Calibration is required annually; the high service was done in August.

The temperature is cooling down, so soon we will stop feeding carbon. Carbon is feed in warmer weather when algae are the most active.

Have a fun and safe Halloween
